

sproof Developer Challenge

Thank you for deciding to consider a career with sproof.

You have already impressed us very much in the first interviews and we are already convinced of the career steps you have taken so far and of your personality. Now we would like to see how good your programming skills are.

Please see below the guidelines of the coding challenge. Before beginning the challenge we ask that you reply to this email to let us know how much time you estimate you will need to complete the challenge and when we can expect your completed code.

You can provide a link to a git repository or a zip file containing source code.

Coding Challenge:

- Please develop a React JS application utilizing MUI (material UI) as the UI framework, with a Node.js backend.
- The application should be able to display a PDF document and a signature wizard.
- The backend should provide a JSON REST API for all endpoints you require.
- The signature wizard should collect the user's name and require a PIN (default: 1337) to successfully collect a signature.
- You DO NOT need to apply a correct and valid signature to the PDF document. Returning a successful response is acceptable.
